

## RESATO COMPUTER RECORDER type RCR-USB

The Resato plug and play PC data acquisition and recording system, converts Resato USB pressure transmitter signals into a real-time pressure measurement.

The included software is effortless to use with the intuitive HMI layout. Within the software it's possible to enter customer data and object data and data can also be saved to the RCR database for quick recall.

The pressure is real-time displayed in an onscreen auto scaling graph. After a pressure test the system converts the data automatically to a PDF test certificate or .CSV file.
